HANDLING WATER-DAMAGED TRX-1000S & TRX-2000S RECEIVERS

Evidence that a receiver has been damaged by water from any source and in any amount may VOID THE WARRANTY. Damage can vary, depending on how the receiver is handled immediately after it gets wet.

If your receiver has gotten wet (by rain, snow, dropping in pond, etc.):

- A. The signal meter **needle** sticks at the right side of the meter. The needle stays up or "hangs" rather than coming down.
- B. **DO NOT OPERATE** during this time. Turn power **OFF**.
- C. If your receiver has been **dampened by moisture**:
 1. Turn box upside down with lid open to form an inverted V.
 2. Draw moisture out with a fan or blow dryer set on **LOW**. Dry by blowing air through receiver from one end to another.
- D. If water **runs out** of receiver when turned upside down, the circuit boards have been drenched with water. **Minimize damage as quickly as possible.**
 1. Remove the four corner screws on receiver face.
 2. Take the complete receiver assembly out of box.
 3. Disconnect the battery: pull apart white connector at right.
 4. Turn on oven to 200 degrees, open door, and **pull out** bottom rack.
 5. Put receiver assembly on rack so warm air will pass over it.
 6. **DO NOT PUT RECEIVER IN OVEN**, even with door open.
 7. After receiver assembly has dried, reassemble using **new** battery pack (\$35.00). Receiver moisture usually harms battery, which then corrodes and leaks onto circuit boards.

NOTE: These recommended actions do not guarantee that the receiver will work when reassembled. If the receiver works, there is no guarantee that it will continue to do so for a long period of time. However, the above actions will slow down or minimize corrosion of circuitry.

If the receiver works, the customer may continue to use the unit. However, **we recommend that the receiver be returned to WMI as soon as possible for inspection.** WHEN A RECEIVER IS OPENED, THE SENSITIVITY AND CALIBRATION MAY BE ALTERED.

If the receiver does not work, send it back to us for a **repair estimate.** **Please include all receiver parts in your shipment.** Also include your **phone number** and a **written message** that explains unusual behavior and your actions to stop the behavior. This info will help technicians go quickly to the problem, saving time and repair costs.
